Daintree — Custom icon set

Batch 1 · 8 icons · Drawn to be contributed upstream to Lucide

Daintree is an Electron IDE for orchestrating AI coding agents alongside terminals and git worktrees. The UI runs on Lucide line icons. We need eight new icons covering concepts Lucide doesn't yet have — and our intent is to **contribute them upstream to the Lucide library**, not just bundle them privately. The brief below treats Lucide's design guide as binding.

VISUAL SPECS

- **Grid:** 24 × 24, optical alignment to Lucide's grid
- **Stroke:** 2 px, round caps, round joins, `currentColor`
- **Fills:** none, except where explicitly called out (one icon uses a single filled dot)
- **Complexity:** match Lucide complexity — typically 3–7 path / circle / rect elements per icon. A touch busy is fine if it matches the family (e.g. Lucide `brain` has 8, `folder-tree` has 4)
- **Naming:** kebab-case, concept-first, no brand words (e.g. `git-worktree`, not `daintree-worktree`)
- **Delivery:** individual optimised SVG files, no inline styles or transforms, named per Lucide convention
- **Construction reference:** lucide.dev/contribute/icon-design-guide

CONTRIBUTION INTENT

These icons are commissioned for Daintree, but the goal is for them to become Lucide icons that other developers can use. That sets the bar:

- Each concept must be **generally useful** — not Daintree branding (a git worktree icon, not a "Daintree worktree" icon).
- Each construction must satisfy Lucide's design guide exactly — we'd rather lose brand distinctiveness than fail Lucide's review.
- Each icon should look **indistinguishable from existing Lucide icons** when sat next to them.

BRAND VIBE — DIGITAL ECOLOGY

Daintree is named after the rainforest. The product is a "digital ecology" — agents, worktrees and terminals living and growing in one environment. The vibe shows up in the *choice* of recurring motifs (branches, pulses, leaves, signals through canopy), **not** in decorative flourishes inside individual icons.

- **Recurring motifs:** branches and stems, single leaves, pulses and waves, containers fed by stems, small origin nodes.
- **What we don't draw:** no robots, no faces, no rainforest scenes, no decorative leaves. Every element earns its place.
- Full brand notes: `docs/brand/digital-ecology.md` in the repo (also reproduced above for convenience).

TWO KINDS OF WORK IN THIS BATCH

Five of the eight are **cleanup redraws** — the existing composition is correct, we just need it executed cleanly to Lucide standards (line quality, stroke weight, optical alignment, drop the small inconsistencies). These should be quick.

Three of the eight are **genuine redesigns** — the current icon doesn't work and we want a new composition. These are where the brief gets prescriptive.

The split is called out at the top of each entry. Don't apply redesign-level invention to a cleanup task, and don't treat the prescriptive briefs as suggestions.

CLEANUP REDRAWS (3 ICONS)

For these, the existing composition is right — we just need it executed cleanly to Lucide standards. Don't reinvent the metaphor.

01 Worktree

`git-worktree`

A git branch checked out into its own directory. Lucide has `git-branch` but no equivalent for "branch lives inside its own workspace."

Cleanup — composition is right. Origin node + curved stem + rounded container. Redraw cleanly to Lucide stroke weight and proportions; drop the small tick mark inside the rectangle.

Generalises as: git worktree / branch-with-workspace.

TODAY

STYLE CUE

git-branch

02 Worktree Overview

`git-worktrees`

Plural of #01 — multiple worktrees from one origin.

Cleanup — composition is right. Same origin-and-stem language as #01, feeding two stacked containers instead of one. Redraw at the same stroke and proportions as the new #01 so the pair reads as siblings.

Generalises as: git worktrees / multi-checkout / branched workspaces.

TODAY

STYLE CUE

git-branch

03 Project Pulse

`heartbeat`

A heartbeat-style line signalling live activity. Distinct from Lucide's `activity` (single peak); this carries two peaks of different heights to read as variable rhythm.

Cleanup — convert from filled to line. A single edge-to-edge waveform stroke with two upward peaks (one tall, one shorter) and a brief dip between them. Today's icon's general shape is right; we just need it as a clean line.

Generalises as: pulse / heartbeat / activity-with-rhythm.

TODAY

STYLE CUE

activity

REDESIGNS (5 ICONS)

For these, the current icon doesn't work and we need a new composition. Each entry below names the core elements; coordinates and proportions are the designer's call.

04 Daintree Agent

`brain-sprout`

A thinking, growing AI agent — brain (intelligence) plus a small leaf accent (organic growth). An organic alternative to Lucide's `bot`.

Redesign. Core elements: a brain plus one small leaf accent emerging from the top. Direction: take Lucide's `brain` and replace one of its upper outer arcs with a small leaf shape; keep the rest intact. The leaf is a single small accent, not a focal point. **No bots, robots, antennae, or faces.**

Generalises as: AI agent / organic intelligence.

TODAY

STYLE CUE

brain

leaf

05 Broadcast Terminal

`terminal-broadcast`

A terminal that broadcasts input to others. Same family as Lucide's `square-terminal`, but with broadcast arcs replacing the prompt detail.

Redesign. Core elements: a rounded terminal rectangle, plus two or three concentric arcs radiating from one corner of it. Drop everything else — no chevron, no prompt lines, no broadcast tower. Just the rectangle and the arcs.

Generalises as: terminal broadcast / multi-cast command.

TODAY

STYLE CUE

radio-tower

06 Copy Tree

`clipboard-tree`

Captures a hierarchy (file tree, outline, structure) to the clipboard. A hybrid of Lucide's `clipboard` and `folder-tree`.

Redesign. Core elements: a clipboard outline, with a small file tree inside — one root and two children connected by L-shaped lines. The tree should be the dominant visual; the clipboard is a supporting frame.

Generalises as: clipboard tree / hierarchy capture / structure copy.

TODAY

STYLE CUE

folder-tree

copy

07 Terminal Recipe

`terminal-script`

A scripted sequence of terminal commands. Combines Lucide's `square-terminal` (the prompt) with `scroll-text` (stacked lines).

Redesign. Core elements: a terminal frame, a small leading > chevron at top-left of the inside, and three stacked horizontal command lines (the third shorter, suggesting a varied sequence). Nothing nested, no arrows.

Generalises as: terminal script / command list / shell sequence.

TODAY

STYLE CUE

square-terminal

scroll-text

08 Watch Alert

`eye-alert`

An eye that's "watching with notification." Pairs with Lucide's existing `eye`, `eye-off`, `eye-closed` family.

Redesign. Core elements: a Lucide-style eye (almond outline + pupil), plus a single filled solid dot at the upper-right corner of the canvas. The eye is slightly downsized and shifted down-left to make room. The corner dot is the only filled element in the icon.

Generalises as: watching with notification / observed-with-alert.

TODAY

STYLE CUE

eye
